

One-Day Workshop on Patent Filing Process in India

A one-day workshop on the "Patent Filing Process in India" was successfully organized on 4th April 2026 for the students of BCA. The workshop was conducted under the aegis of the Research & Development (R&D) Cell and the Institution's Innovation Council (IIC) of the college.

The primary objective of the workshop was to create awareness among students about intellectual property rights and to provide them with a clear understanding of the patent filing process in India. The session proved highly beneficial, especially for students interested in innovation, research, and entrepreneurship.

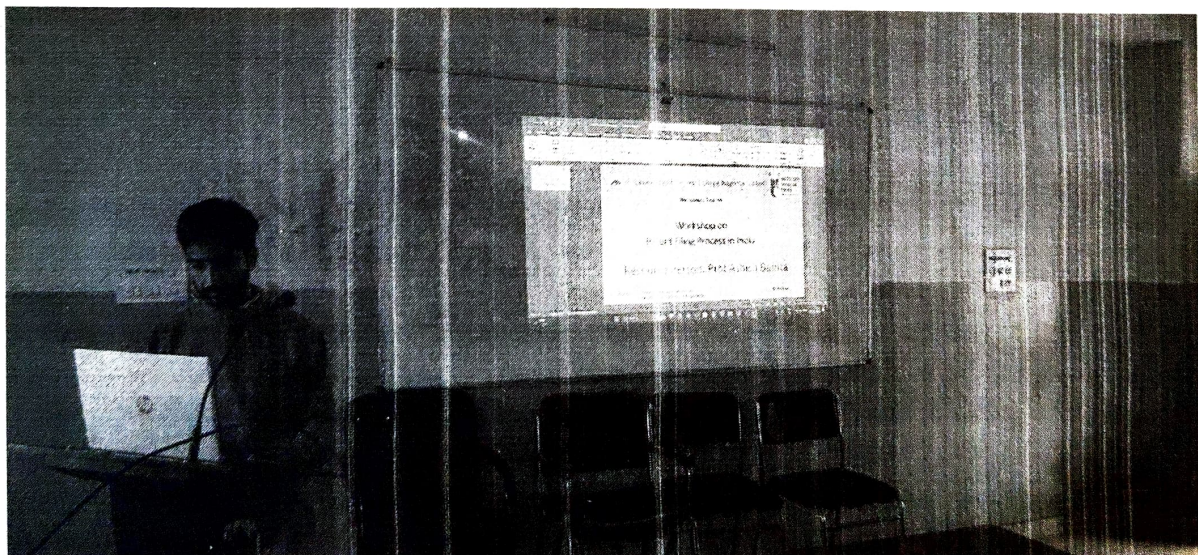

The resource person for the workshop was Prof. Ashish Bamta, Assistant Professor in Mathematics, who delivered an insightful and engaging session. He elaborated on the fundamentals of patents, types of intellectual property, and the importance of protecting innovative ideas. He also explained the step-by-step procedure of patent filing, including prior art search, drafting of patent applications, filing procedures, and examination process.

Prof. Bamta further highlighted real-life examples and case studies to make the concepts more relatable and easier to understand. He also guided students on how they can convert their academic projects into patentable innovations. The interactive session allowed students to ask questions and clarify their doubts regarding the technical and legal aspects of patent filing.

The workshop witnessed active participation from BCA students, who showed great enthusiasm and interest throughout the session. It significantly enhanced their knowledge about intellectual property rights and encouraged them to think innovatively.

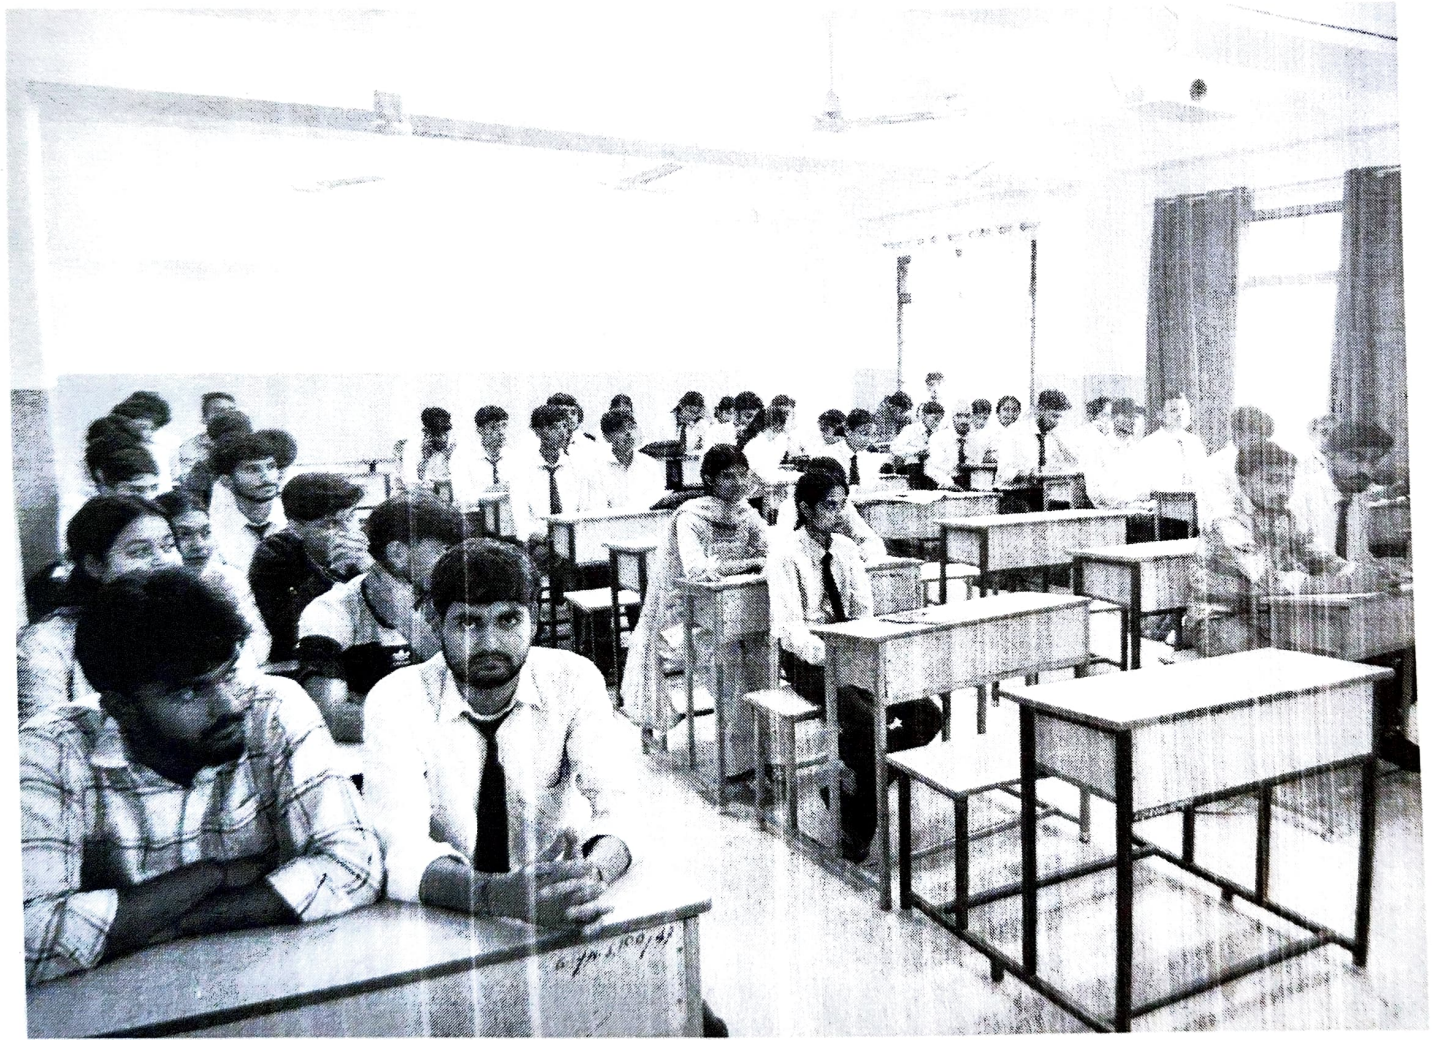

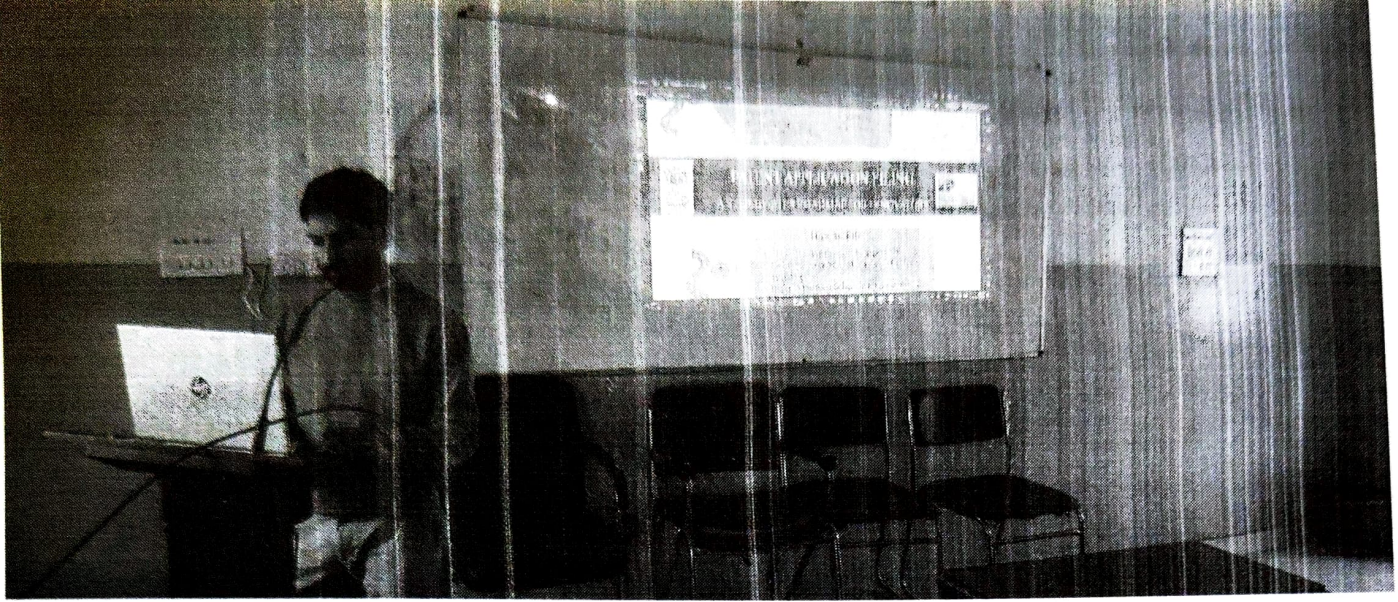

The event concluded with a vote of thanks, expressing gratitude to the resource person for his valuable contribution and to the organizing bodies—R&D Cell and IIC—for successfully conducting the workshop.

Overall, the workshop was informative, engaging, and highly productive, leaving students inspired to explore innovation and research with a better understanding of patent protection.
